

Rise Up Emberays® Rose

Rosa 'Bozfra321'

Height: 5 feet

Spread: 3 feet

Sunlight:

Hardiness Zone: 5a

Group/Class: Shrub Rose

Description:

A wonderfully versatile variety with a neat and dense habit that forms an attractive shrub, or can be trained on trellises and arbors; nicely fragrant, orange and yellow blooms, with glossy, deep green foliage; long blooming, and disease resistant

Ornamental Features

Rise Up Emberays Rose features showy clusters of fragrant semi-double orange flowers with coral-pink overtones and lemon yellow centers at the ends of the branches from early to late summer. The flowers are excellent for cutting. It has dark green deciduous foliage. The glossy oval compound leaves do not develop any appreciable fall color.

Landscape Attributes

Rise Up Emberays Rose is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees to your yard. It has no significant negative characteristics.

Rise Up Emberays Rose is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Rise Up Emberays Rose will grow to be about 5 feet tall at maturity, with a spread of 3 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. To help this plant achieve its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
